Features of the RFID System

The SMARTFuel solution combines with the Optimus Vector Fuel System to fully integrate the use of 100% biodiesel into medium and heavy-duty truck fleets. The system consists of RFID-equipped components that enable communication and interaction between vehicles, fuel dispensers, controllers, and data servers. Managers are provided with a new way to visualize their fleet, and are given measured information about fuel costs, consumption, and emissions reduction while using clean-burning 100% biodiesel.

- **Data Monitoring and Technical Analysis of Fleet Data**
- **Fully Encapsulated, Rugged and Anti-Tamper Design**
- **Wireless Operation and Simple Installation**
- **Ensure Accurate Billing, Save on Fuel Costs**

Designed for Medium and Heavy Duty Truck Fleets, including commercial and municipal organizations.

About Optimus

Optimus Technologies is a clean energy technology company based in Pittsburgh, Pennsylvania.
The Optimus Vector System allows vehicles to run on 100% biodiesel, resulting in drastic reductions in greenhouse gas emissions and significant fuel savings. Optimus Technologies helps you reduce your fleet's operating costs and carbon emissions and meet your long-term sustainability targets in a cost-effective way.

OPTIMUS® TECHNOLOGIES

REDUCE FUEL COSTS. REDUCE EMISSIONS. EASILY.

SMARTFuel RFID System Overview

An RFID fuel management system designed to support commercial fleet trucks looking to operate on clean-burning, 100% Biodiesel Fuel.

RFID System Overview

Seamless Integration

Gas Nozzle and Vehicles are equipped with RFID Sensors.

RFID Vehicle and Fuel Nozzle Tags allow automated vehicle identification and are programmable with specific fuel type requirements. A truck operator simply pulls up and refuels as normal. Behind the scenes, the RFID tags on the fuel tank and the gas nozzle are synced and allow fuel to be dispensed.

A Personalized Solution

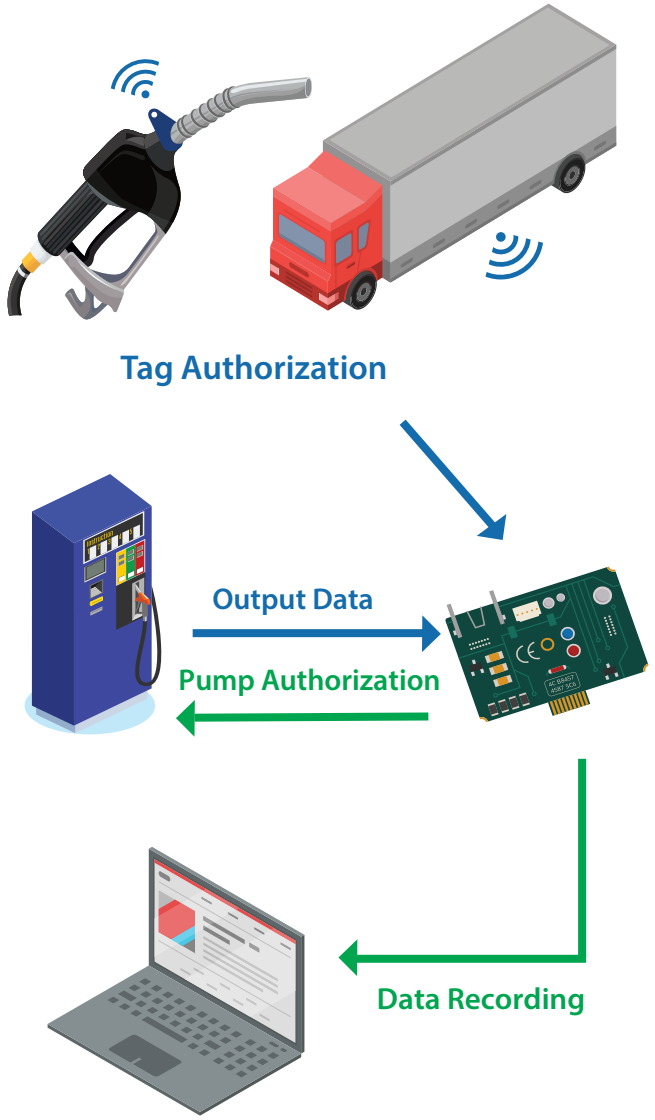
Fuel Dispenser and SMARTFUEL Controller authorize fueling and transmit fleet data.

Optimus and its network of fuel partners offer a total solution by providing a reliable source of biodiesel fuel for your fleet. Optimus works with the major distributors of biodiesel to set up dedicated fueling stations directly on site. These programmable base stations authorize fuel dispensation and relay fueling data to a central controller. This gives Fleet Managers a new level of control, and prevents any unauthorized use of the system.

A New Way to Monitor Your Fleet

The Optimus Server collects all data for Fleet Managers to review and analyze.

Embedded software relays fleet information to an Optimus server to track locations, fuel usage, emissions reductions, and more. Optimus helps fleet managers visualize their fleet and performance data - all in real time. With this data, managers can better oversee their fleet and see firsthand all of the benefits using biodiesel offers.



How Washington D.C. Cut Emissions with Optimus and B100 Biodiesel

When Fleet Managers in Washington D.C. needed to cut emissions, they sought out the Optimus Vector Fuel System, which enabled their trucks to run 100%, clean-burning biodiesel. With the systems installed, D.C. Public Works then needed a reliable, on-site fueling station that would make the transition to sustainable biofuel as simple as possible. Optimus offered a total fuel solution with the SMARTFuel RFID management system.

The SMARTFuel System ensures a reliable, dedicated fuel supply for a fleet. This comes with no impact to day-to-day operations, as drivers simply pull up and fuel as normal. Behind the scenes, a sophisticated system ensures proper, authorized fueling while tracking key data points.

With Biodiesel and the SMARTFuel System, D.C. has reduced total emissions by 86% and prevented 1,598 tons of carbon from entering the atmosphere
