Slushie Machine — Cleaning & Sanitizing

Main Winery · GW-FS-002 · v1.0

⚠ Perform this procedure weekly, or anytime between product changes. Do not skip steps — sequence matters for food safety.

Step	Action	Details / Time
SANITIZING PROCEDURE		
1	Drain the slushie machine completely of all slushie contents.	*Machine must be empty*
2	Run hot water through the machine to flush residue.	*Flush until clear*
3	Add one sanitizing packet with fresh hot water to the machine.	*Use correct packet size*
4	**Let the sanitizer solution sit — do not drain early.**	*⏱ 30 minutes minimum*
5	Drain the sanitizer solution fully.	*Drain completely*
6	Wipe out the interior of the machine.	*Use clean cloth*
7	Refill the machine with slushie mix. Press button until display reads SLUSH.	*Check display reads SLUSH*

☑ Machine is ready for service. Log the cleaning in the Cleaning & Sanitizing Log (12-LOG-004).

WHEN TO PERFORM THIS PROCEDURE

Weekly — minimum cleaning frequency regardless of use
Between product changes — before switching to a different slushie mix flavor
If machine was in Standby overnight — inspect before returning to service

SUPPLIES NEEDED

- ☐ Sanitizing packet (stored: [location])
- ☐ Hot water
- ☐ Clean cloth or paper towels
- ☐ Slushie mix (to refill after cleaning)

📋 Food Safety: This procedure supports HACCP sanitation requirements. All cleaning must be logged. See manager if supplies are low.
